Jl. letnan sudiono no 06. bondowoso, jawa timur

With 3+ years of experience as a Fullstack Engineer, I have developed various systems spanning backend, web, and AI integrations. I am experienced in designing scalable application architectures, building reliable APIs, and implementing responsive and user-friendly web interfaces. Furthermore, I have experience integrating machine learning models into production systems to improve operational efficiency. With a focus on continuous technology development and system performance improvement, I am constantly learning new things and am ready to face the challenges of building end-to-end solutions that provide added value and competitive advantage to companies.

Work Experiences

PT. Elnusa Petrofin - **Jaka**rta, Indonesia — May 2026 - Okt 2026

Full Time Remote | *Full-stack Developer*

- Developed & maintained full-stack web applications for Treasury Management and Cash Flow Tracking projects, focusing on building reliable, scalable, and user-friendly systems to support financial operations and monitoring.
- Designed and implemented responsive frontend interfaces using RemixJS, ensuring intuitive navigation and efficient user interactions across the application.
- Developed backend services using Next.js, implementing business logic and APIs to support seamless communication between the frontend and database layer.
- Managed application data using PostgreSQL with Prisma ORM, including database schema design, data modeling, and efficient data access to ensure data consistency and application performance.
- Collaborated throughout the development lifecycle to integrate frontend, backend, and database components into cohesive end-to-end solutions, while maintaining code quality, scalability, and system reliability..

PT. Solusi Makmur **(SOMA)** - **Bondowoso, Indonesia** — Feb 2026 - Present

Full Time Hybrid | *Full-stack Developer*

- I Developed and maintained Sicare, a web and mobile-based homecare application using Laravel and Flutter, implementing backend services, business logic, RESTful APIs, database integration, and responsive user interfaces to support healthcare service management.
- Integrated web, backend, and mobile components into a cohesive end-to-end system, ensuring seamless data communication and consistent user experiences while collaborating throughout the development lifecycle to implement features, troubleshoot technical issues, and optimize application performance and reliability.

PT. Global Data Inspirasi - **Yogyakarta, Indonesia** — Aug 2023 - Aug 2025

Full Time Remote | *Full-stack Developer*

- I have developed and implemented efficient and secure RESTful APIs using Golang, serving as the backbone for a web-based OTA (Online Travel Agency) hotel application. During development, I collaborated closely with the frontend team to ensure seamless integration between the backend and client application, resulting in smooth booking flows and optimized user experience.
- I also focused on optimizing database queries and managing data using AWS cloud services (including RDS for PostgreSQL and S3 for storage) to ensure high availability, security, and scalability of the system. This allowed the application to handle real-time room availability updates, bookings, and payment processes effectively.
- Contributed to backend development using Golang by implementing a structured and maintainable architecture to manage hotel, room, and booking data. Developed RESTful APIs and configured environment-specific settings for development, staging, and production stages. Leveraged Docker to ensure consistent and scalable application deployment across various environments.

PT. Intinya Group - **Jakarta, Indonesia** — Aug 2024 - Sep 2026

Full Time Remote | *Full-stack AI Developer*

- I built an object detection system integrated with CCTV using YOLO and Deep SORT for real-time detection and tracking via RTSP. The system was deployed on a CI/CD pipeline, with Qdrant for vector search and PostgreSQL for data management, encompassing performance analysis,
- I built an outfit detection system by leveraging data stored in AWS S3, using Roboflow for dataset preprocessing and augmentation. The model pipeline combined Grounding DINO for object detection and Segment Anything Model (SAM) for precise segmentation of clothing items. I containerized the solution with Docker and deployed it as a scalable service, enabling real-time inference and easy integration with other systems.
- I built a Retrieval-Augmented Generation (RAG) based chatbot using GPT-3.5 Turbo and Coherence AI, connected to Qdrant (for vector search) and MongoDB (NoSQL), with deployment handled via Docker (CI/CD) and system monitoring using Prometheus and Grafana.

- To improve user experience, I designed and developed mockups and interactive dashboards using React.js, enabling rapid prototyping and seamless integration with the backend services.

Education Level

Politeknik Negeri Jember - **Jember, East Java, Indonesia** Sep 2020 - May 2024

Bachelor of Information System, 3.77/4.00

- Finalist of the Gemastik XV Competition in the Data Mining Category

Skills, Achievements & Other Experience

- **Achievements** (2022): Gemastik XV Competition in the Data Mining Category
- **Skills :** JavaScript, Python, Java, Dart, React.js, Next.js, Remix, Flutter, HTML, CSS, Laravel, Flask, Golang, RESTful API, PostgreSQL, MySQL, MongoDB, Prisma ORM, Qdrant, AWS (RDS, S3), Docker, CI/CD, NgRx, YOLO, Deep SORT, Grounding DINO, GIT, SAM, RAG, GPT-3.5 Turbo, Roboflow, Prometheus, Grafana, .NET
